

CASE HISTORY # 123

PROJECT:
PRIVATE RESIDENCE
FRUIT HEIGHTS, UT

DATE:
FALL 2010

North America's premier waterproof vinyl flooring systems. Since 1974

PROBLEM:

The large decks on these homes had been covered with indoor/outdoor carpeting. There was a rubber mat installed underneath but moisture found its way into the wood underneath and the carpet held it there. The deck began to rot and serious damage was done to the home. What the homeowner thought would be a small repair turned into a very significant one.

DURADEK SOLUTION:

Duradek Heritage Sienna was a great compliment to the homes color scheme. The OSB substrate was removed and replaced with 3/4 tounge and groove plywood. This provided an excellent substrate for this wonderful outdoor entertaining area. There was such extensive damage from the water trapped under the carpet that even some of the posts had to be replaced. Once the Duradek was installed the homeowners were able to enjoy their incredible view of the valley.

JOB NOTES:

The damage to this deck was so extensive that there was some concern about even being able to stand on it without falling through. Now it can take the weight of dozens of people enjoying the view!
