

CASE HISTORY # 131

PROJECT:
PRIVATE RESIDENCE
KAYSVILLE, UT

DATE:
MARCH 2012

North America's premier waterproof vinyl flooring systems. Since 1974

PROBLEM:

This residence in Kaysville had the advantage of a decent sized yard, but no deck to enjoy their outdoor space—just a lonely slab of concrete outside of their back door.

The owners wanted to install a deck above for additional outdoor living space while still making use of the slab below. They also wanted to have added dry storage below the deck that didn't take up much of their leisure space.

DURADEK SOLUTION:

Planned and built with the advantages of Duradek in mind, the deck was erected with the proper slope for water drainage before laying the vinyl. The deck exit of a small switch-back stairway to the yard below serves a second valuable purpose as well. Underneath the landing of the stairway is an enclosed storage area giving the homeowners an additional 100 sq. ft. of DRY storage space... securely waterproofed on the stair landing above with *Duradek Ultra Marble* membrane.

JOB NOTES:

Shane at MBL Construction is a perfect example of the professionalism of the Duradek Installer. While not important to all home owners, Shane always goes the extra mile in recessing the heat-welded seams of the Duradek vinyl for a very clean appearance.
