

CASE HISTORY # 152

PROJECT: RESIDENTIAL DECK, BOISE, ID

DATE: APRIL 2013

North America's premier waterproof vinyl flooring systems. Since 1974

PROBLEM:

This residential deck is situated in an ideal location for enjoying the vista and relaxing. The owner of the home had felt that waterproofing the deck was something he could easily complete, which he did by applying a liquid coating. Unfortunately the liquid system failed and the homeowner once again invested his time and money into protecting the deck with the same ineffective liquid coating system. After the coating started to show cracking after the second attempt, the homeowner decided to look for other waterproofing options to surface his deck.

DURADEK SOLUTION:

The local Duradek dealer was called to assess the deck. The failure of the existing coating had allowed enough water to get underneath to the substrate to cause damage. While sometimes sanding the failed coating down is adequate for the application of Duradek vinyl, in this case to finish the job safely and professionally a new substrate was recommended before installing Duradek Ultra Heritage Sunrise. The basket style picket railing from Durarail is a powder coated aluminum and offers the same low maintenance benefits as the Duradek vinyl.

JOB NOTES:

In addition to the waterproofing longevity that Duradek vinyl membranes offer, the application is a much less intrusive process and allows you to enjoy your deck right away. While liquid coating systems require time to dry, often with multiple coats being applied, Duradek's single ply systems allows you to use the deck immediately after Duradek has been applied. No drying or curing time...no reapplication. Just a beautifully protected deck.
