

## Duradek™ and Durarail™ take the risk out of designing and building decks.

One of the most popular design considerations of multifamily buildings is the addition of sun decks, patios, and rooftop decks to the individual home. These decks provide outdoor living spaces that were formerly only a roof, a landing, or a carport.

**Duradek and Durarail provide a complete worry-free system for all your decking and flat roof deck needs.**

This time-tested system is a cost-effective solution to popular exterior residential design features that challenged architects and builders in the past.

**Duradek™** is a decorative exterior walking surface, but also performs as the waterproofing/roofing membrane - all in one single-ply PVC membrane adhered to a plywood or concrete substrate.

**Durarail™** is a powder-coated aluminum railing system that will ensure the safety of the occupants enjoying the deck.

Duradek and Durarail are installed professionally by a team of trained applicators to ensure the integrity of the waterproofing is maintained.

As cities are becoming more and more congested, there is growth in the number of planned communities that are increasingly the mainstay for new residential construction.

Many planned communities have a substantial amount of multifamily residences catering to every walk of life from entry-level first home buyers to empty nesters looking for less maintenance, more luxury and amenities, as well as outdoor living space. Townhouses, condominiums, apartments, and even mixed-use buildings with commercial space on the lower floor(s) and residential space above. **All benefit from waterproof outdoor living space.**

*For a free, no-obligation, consultation, please contact your local representative (see next page).*

## What is Duradek™?

Duradek is the leading brand in the vinyl decking industry. Duradek PVC membranes provide waterproof walking surfaces for sun decks, balconies, patios, and more. It is a walkable roof membrane approved to use over living space in roof deck and rooftop patio applications. Duradek is available in Class A and Class C fire-rated assemblies and meets 2018 IBC & IRC standards.

**Duradek integrates with the building envelope ensuring the structure is waterproof protected at common points of moisture vulnerability on decks and balconies.**

Our superior products are manufactured and delivered through a 3rd party quality control program. Duradek is installed only by trained and authorized applicators ensuring the highest quality waterproof performance for your projects.

## NEARLY 50 YEARS OF PROVEN PERFORMANCE
