## Introducing Duradek Ultra Arctic Quartz Vinyl Decking

### *Exceptional Styling in a Class of it's Own*

Surrey, BC, July 6, 2017: [Duradek](#), is excited to introduce Duradek Ultra Arctic Quartz, and at the same time, announce 'QUARTZ' as a new line of our Ultra vinyl membranes.

*Ultra Arctic Quartz* is a striking, dynamic texture of multi-tonal off-white and greys for a new option that will fill market demands for the popular grey exterior colour schemes.

Its lighter base offers reflective qualities while a cleverly designed speckle pattern adds depth and style; as well as an effective background to camouflage light organic sediment that can accumulate on an exposed deck surface.

Following the success of '*Legacy Desert Quartz*', we recognized the need for an additional colour choice in this exceptional pattern. With this addition we are now designating the 'Quartz' pattern as its own, unique line.

**Duradek Ultra Desert Quartz:**  
Introduced with the "Legacy" Line - but initiated the New "Quartz" Line

*Duradek was created to solve difficult waterproofing problems over 40 years ago and it is still one of the most reliable methods for long-lasting, low-maintenance waterproof decks and roof decks available on the market today.*

*Actual colour under natural light may appear slightly different than it appears on this document.*

*Arctic Quartz* is a cooler option than it's counterpart, *Desert Quartz* (left) which was introduced with the Legacy Line of naturally inspired textures in 2016.

Already available and receiving rave reviews, *Desert Quartz*. (previously *Legacy Desert Quartz*) was the inspiration for this new designer line of Duradek vinyl deck membranes.
